## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, 20-29, drawn to a frequency conversion in a radio transmitter, classified in class 455, subclasses 93, 118, 126.
  - II. Claims 11-19, drawn to a method of generating a continuous wave IF signal in a transmitter, classified in class 375, subclass 295.
  - III. Claims 30-37, drawn to a digital processor in details, classified in class 375, subclass 295.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the Invention I related to components in a radio transmitter used for conversion signals. The Invention II has separate utility such as "sampling the digital data at a rate corresponding to the sample rate to produce a zero th order continuous waveform signal" used for producing a continuous wave IF signal, and Invention III have separate utility such as "a first digital

filter", "a Gaussian filter", "a phase modulation index adjustment block", "a rotation digital computer", "a second digital filter". These components use in a digital processor.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II or III, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
